Paper 2 AS Structured Questions

October/November 2011

1 hour

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

(i) horizontally,

horizontal component = N [1]

(ii) vertically.

vertical component = N [1]

(d) Two strings support a load of weight 7.5 N, as shown in Fig. 1.2.

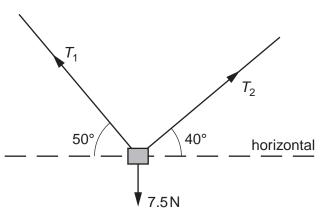

Fig. 1.2

One string has a tension T_1 and is at an angle 50° to the horizontal. The other string has a tension T_2 and is at an angle 40° to the horizontal. The object is in equilibrium. Determine the values of T_1 and T_2 by using a vector triangle or by resolving forces.

$$T_1 = \dots N$$
 $T_2 = \dots N$

For Examiner's Use **2** The variation with time t of velocity v of a car is shown in Fig. 2.1.

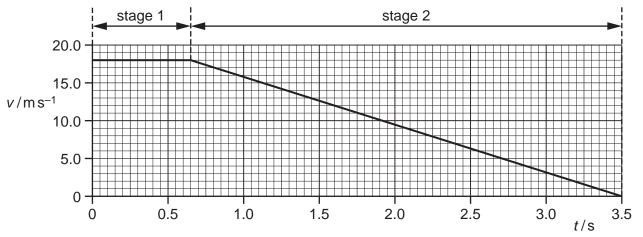

Fig. 2.1

At time t = 0, the driver sees an obstacle in the road. A short time later, the driver applies the brakes. The car travels in two stages, as shown in Fig. 2.1.

(b) A crane is used to lift heavy objects, as shown in Fig. 3.1.

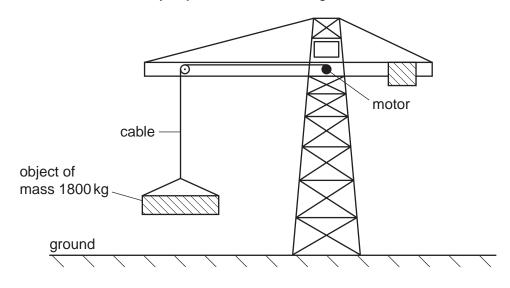

Fig. 3.1

The motor in the crane lifts a total mass of 1800kg from rest on the ground. The cable supporting the mass is made of steel of Young modulus $2.4 \times 10^{11} \, \mathrm{Pa}$. The cross-sectional area of the cable is $1.3 \times 10^{-4} \,\mathrm{m}^2$. As the mass leaves the ground, the strain in the cable is 0.0010. Assume the weight of the cable to be negligible.

Use the Young Modulus of the steel to show that the tension in the cable is (i) 1. $3.1 \times 10^4 \text{ N}.$

[2]

Calculate the acceleration of the mass as it is lifted from the ground.

acceleration = ms^{-2} [3]
